

Hello, I'm Thomas Maufer.

In my career I've designed and built data centres for Google Fiber and helped 4 startups succeed.

Thanks for your attention as I introduce **OuiVerte!**, a new French company integrating efficient sovereign cloud infrastructure and sustainable energy.

Why will **OuiVerte!** succeed?

First, let's take **sovereignty** and **resilience**...

- European demand for **sovereign cloud services** (for instance, to support data repatriation) is rising.
- **OuiVerte's Fractional Data Center fabric** supports **sovereign cloud** workloads.
- As to **resilience**, our FDC fabric has no central control points, so, no single points of failure.
 - Thus we are not an obvious target for any adversary.

Now, let's consider **sustainability**...

- We capture renewable heat for sale to District Heating systems, creating a **circular energy economy**.
- We **re-use** space in downtown buildings, enhancing our sustainability.
 - Being closer to our customers reduces latency.
- Finally, we deliver both **Primary** and **Backup** power from batteries, charged with certified renewable energy.
 - **#neverdiesel**

Our proprietary **orchestration AI** optimizes our operational efficiency, by:

- Managing customer workloads,
- Stabilizing the grid, and
- Maximizing the value of our heat.

OuiVerte! stands out by our always-improving **efficiency**, integrated **sustainability**, data **sovereignty**, service **resilience**, and **low latency**, with our modular, agile deployment.

OuiVerte!'s passionate founders are building a responsible company, motivated by challenging yet achievable goals, inspired by the thought of joining **Station F's Founders Program**.

Thank you for considering ***OuiVerte!***
